■ What They Do

Dental Hygienists are licensed oral healthcare professionals who focus on **preventive dental care, patient education, and the early detection of oral health issues**. They work closely with dentists to help patients maintain healthy teeth and gums while reducing the risk of cavities, gum disease, and other oral conditions. Rather than performing restorative procedures, dental hygienists specialize in prevention, assessment, and long-term oral wellness.

This career is well suited for individuals who enjoy working directly with patients, value health education, and want a stable healthcare role with a strong balance of technical skill and interpersonal care.

What Do Dental Hygienists Do?

Dental hygienists provide routine preventive care and support overall dental treatment plans. Their work combines hands-on clinical tasks with patient education and documentation.

Common responsibilities include:

- Taking and developing dental X-rays
- Measuring gum health and identifying signs of periodontal disease
- Applying preventive treatments such as fluoride or sealants
- Educating patients on proper brushing, flossing, and oral care habits
- Documenting patient findings and communicating with dentists
